

Power Electronics and Microgrid Control for Power System Applications Introduction to Microgrids

Dr. Adel Nasiri

University of Wisconsin-Milwaukee

Email: nasiri@uwm.edu; URL: www.uwm.edu/~nasiri

Index:

1. What is a Microgrid?
2. Microgrid Importance
3. Technical Drives Behind Microgrids
4. Economical Drives Behind Microgrids
5. Existing μ grid Systems-CERTS
6. Features of CERTS Microgrid Testbed
7. 3 MW Santa Rita Cor. Facility Test Site
8. SPIDERS: The Smart Power Infrastructure
9. Demonstration for Energy Reliability and Security
10. SPIDERS Microgrid Implementation Plan
11. 700 kW Fort Sill Microgrid Project
12. Microgrids with High Penetration of Renewables
13. Microgrid Configuration
14. Microgrid Configuration – DG added
15. Microgrid Components
16. Microgrid Configuration - Load Profiles
17. Microgrid Source Models - PV and Wind
18. Microgrid Components - Solar PV
19. Wind Turbine Modeling
20. Wind Turbine Co-Simulation Flow
21. Microgrid Source Models - Diesel
22. Detailed Model for a Diesel Generator
23. Microgrid Source Models – Diesel Testing
24. Microgrid Storage: Zinc-Bromide Battery
25. Properties of Zinc-Bromide Energy Storage
26. Installed at UWM
27. Zinc Energy Storage System (ZEES) Testing
28. Microgrid Storage: Lithium-Ion Capacitor
29. Ultracapacitor Testing
30. Ultracapacitor Model
31. Ultracapcitor Model Verification
32. Needs for Inverter Average Models
33. Inverter Topology and Specifications
34. Inverter Topology
35. Proposed Average Inverter Model Topology
36. Average Model Control Strategy
37. Modulation Technique - SVM
38. Modulation Technique - SVM=>SPWM

39. SPWM Equivalent for SVM
40. SPWM Equivalent for SVM (cont'd)
41. Calculation Zero Sequence
42. Impacts of Dead, Rise, and Fall Times
43. Effects of Transistor and Diode Voltage Drops
44. Effects of Practical Issues on Duty Ratio
45. Limitations on Duty Cycle
46. Model of the SVM Modulator
47. Modeling Low Pass Filter
48. Low Pass Filter Modeling
49. Results and Comparison
50. Experimental vs. Simulation Results
51. Functions for Microgrid Controls
52. Controls for Storage Inverter
53. Controls for Diesel Generator
54. Island Mode - System Modeling
55. Island Mode - Reactive Power Control
56. Constraints on P-Q Controls
57. Managed Renewable Power Profiles
58. Resultant Voltage Profiles
59. Renewables in Grid-Tie Mode
60. Generation Capacity Sizing for Demand
61. Power Quality Performance
62. Power Quality Assessment - Results
63. Smart Feeder Implementation
64. Smart Feeder Implementation
65. PGE HRZ Implementation Results
66. Proposed Microgrid Test Bed Facility
67. Develop Controls for Components to Regulate
68. Voltage and Frequency
69. Power Management for Renewable Energy
70. Supervisory Control
71. Field Supervisory Control
72. Simulation Results– Intentional Islanding
73. Simulation Results- Reconnection
74. Simulation Results- Reconnection
75. Multi-Microgrids
76. Transient to Off-grid
77. Step Loading in Off-Grid Mode
